

FINDING A COMPRESSOR SERIAL NUMBER

Every compressor has a serial number. In fact, there may be two: One from Nuvair (a sticker showing the product type, model, serial number, etc.) as shown to the right, and one serial number that is stamped into the compressor block.

These numbers are important for us to identify correct replacement parts. On most blocks, the serial can be found by looking at the top of the compressor on one of several flat surfaces. Some numbers are stamped next to the oil fill tube and others are located directly behind the cooling fan.
