

Walker Filtration manufactures quality after-market replacement filter elements for the Hankison HF series of compressed air filters. Because element colors and designs do not match between Walker and Hankison, we wanted to clarify what Walker after-market elements match Hankison elements.

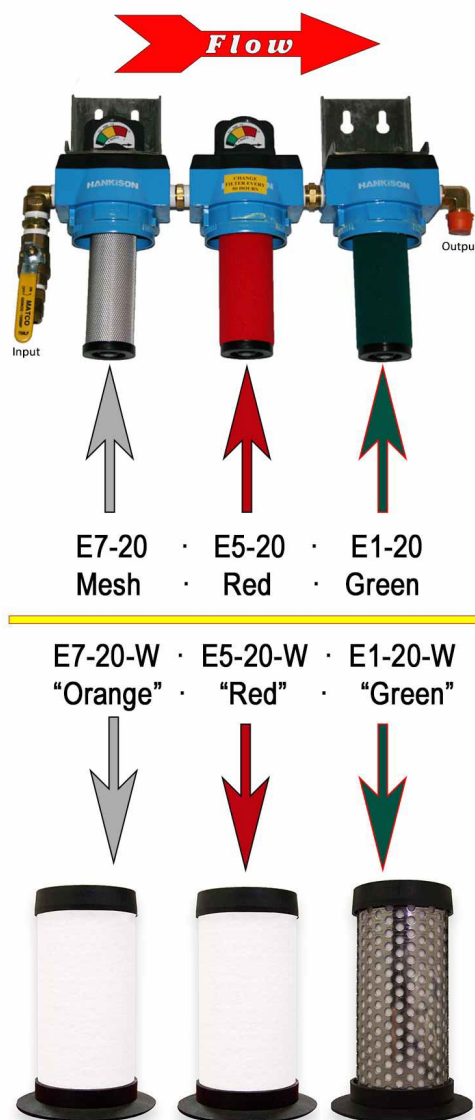

At Nuvair, we use Grade 7 (general purpose air line filter), Grade 5 (high-efficiency oil removal filter), and Grade 1 (oil vapor removal filter) elements in our three-stage packages in flow order.

Because Walker filters are not colored, the company stamps the color name on the element collar (see below).

Walker discontinued the use of reticulated foam because of the risk of breakdown in the airline. Walker now only builds elements with a White Needle Felt Drain layer material because it is stronger and coalesces better than elements made with reticulated foam.
