

Dräger DiveSorb® Pro Rebreather Diving Equipment

Dräger DiveSorb® Pro was developed specifically for closed or semi-closed rebreathers in order to allow a high degree of CO₂ absorption, and thus long dive times.

Benefits

Absorption of carbon dioxide in diving apparatus

DiveSorb Pro is a high-performance breathing lime, which absorbs the carbon dioxide contained in exhaled air.

Unique hemispherical pill shape

The hemispherical shape of the absorbent ensures low respiratory resistance and long lifecycles.

Optimally aligned absorbent for diving apparatus

The absorbent is perfectly aligned for modern diving apparatus and is suitable for demanding usage. DiveSorb Pro is highly resistant to abrasion, therefore levels of dust formation are very low.
